-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 3723

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 1 is indefinite because there is no antecedent basis for the phrase “the polishing region” on lines 5 and 6 thereof. It is not clear how the “polishing region” differs from the “polishing surface”, since it would appear that any part of the surface in question, except for the central portions of the pad, polishes during a polishing operation. Also, when claim 1 is compared with claim 2 the claims appear to be contradictory in that claim 2 requires the stress buffer pattern to be on the polishing surface while claim 1 requires that it be in a region neighboring to the polishing region.

Independent claim 11 is indefinite because it is not clear what is meant by “forming a polishing region” in a polishing pad, as required in the claim. How does one form a polishing region in a polishing pad, especially one that is designated as having a polishing surface?

Claim 8 is confusing in that it appears that the cambered surface recited on line 3 thereof could be the same as the cambered surface on line 1 thereof.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Sabo (6,783,448). The claimed stress buffer pattern reads on surface or opening 20 or on portions thereof such as the top and bottom portions of the opening.

4. Claims 22-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Halley (6,517,419). Note, for example, the polishing pad of Fig 6C.
